

Welcome to LearningGNM

German New Medicine is not only **a new paradigm of medicine**, it is also **a new consciousness**. It is the awareness that our organism possesses an inexhaustible creativity and remarkable **self-healing capabilities**. It is the recognition that each cell of our body is endowed with a **biological wisdom we share with all living beings**.

The LearningGNM website is dedicated to bringing the medical discoveries of **Dr. med. Ryke Geerd Hamer** to the attention of health professionals and the public at large.

Our presentations, whether they are in writing, via live-classes, by lecture DVDs or through our online tutorials, **focus exclusively on the science of GNM** and are categorically **non-ideological**. We strongly dissociate ourselves from prejudiced statements about German New Medicine on certain websites.

In view of the continuous suppression and growing number of misrepresentations of Dr. Hamer's findings, it is our firm **commitment to uphold the authentic research material and to secure the original work for future generations**. Individuals and groups from around the world have joined us in this endeavor.

To date, our annual **International GNM Conferences** have been attended by **participants from 32 nations**, including Australia, New Zealand, China, India, Russia, South Africa, the United States, Canada, and Mexico as well as most countries in South America and Europe. **Many of our students are now teaching the GNM principles, either in private settings or public talks, in order to introduce their communities to this invaluable knowledge**. For this undertaking they have our continuous support.

Standing up for the truth of The Five Biological Laws is a matter of **social responsibility** and about **care for humankind**. This does not require special permission! Attempts to monopolize the teaching of Dr. Hamer's discoveries are far beyond the true spirit of GNM and the movement that is flourishing across the globe.

We welcome people from all walks of life to LearningGNM and share this new understanding of health and healing with family and friends, so that more of us can enjoy the freedom and the empowerment that the NEW MEDICINE offers.

With my very best wishes on your journey of learning,

Caroline Markolin, Ph.D.
